

Chibuike S. Ewenike.

Software Engineer | Backend & Fullstack | AI Systems

sopewenike@yahoo.com | +234-903-2125-576 | [LinkedIn](#) | [GitHub](#)

Summary

Highly adaptable Software Engineer with strong expertise in Python and JavaScript based backend systems, cloud deployments, and full stack product development. Proven experience building and maintaining production-grade SaaS platforms, including AI-driven systems, e-commerce and e-learning platforms, legal-tech, financial, and booking applications.

Comfortable owning features end-to-end from system design and API development to cloud deployment and performance optimization. Thrives in fast-paced start-ups and scale-up environments. Passionate about building software that solves real-world problems.

Stacks

Languages: HTML/CSS | Javascript/TypeScript | Python | Golang

Frameworks: React | Node.js | Django | Fastapi | Gin | Next.js

Databases: MySQL | PostgreSQL | MongoDB | Redis | Firebase

Tools: Git | Docker | RabbitMQ

Cloud Services : GCloud, AWS, Vercel, Digital Ocean & CPanel

Security & Authentication Tools: JWT | Passport.js | Helmet.js | OAuth2.0

Performance & Monitoring Tools: Postman

Work Experience

Software Engineer — Lexanalytics

2024 — Present (2+ Years)

Lexanalytics is an AI-powered legal research and analytics software.

- Designed and implemented metadata extraction algorithms for parsing law reports, enabling accurate indexing, search, and analytics across legal documents.
- Maintained enterprise-grade authentication systems, supporting secure access for law firms, researchers, and institutional clients.
- Contributed significantly to legal research tools and services, improving data retrieval speed, relevance, and usability for legal professionals.
- Worked on contract drafting and automation tools, enabling structured document generation and reducing manual drafting effort.
- Collaborated with cross-functional teams to translate complex legal workflows into scalable software solutions.

Tech: Python, FastAPI/Django, PostgreSQL, React, TypeScript, AI Models, Haystack

Full-Stack Engineer (Contract) — Nuvoro

2025 – 2026

- Reviewed, cleaned up, and refactored an existing AI-generated full-stack codebase, improving structure, stability, and maintainability.
- Fixed production bugs and UX/UI issues across bookings, subscriptions, and dashboards.
- Added Stripe features including card payment-method updates, subscription auto-renewal, and manual renewals with robust webhook handling.
- Improved authentication, subscription logic, and API contracts across backend and frontend.
- Redeployed and stabilized both backend and frontend services after cleanup and feature additions.

Tech: AWS, Git, TypeScript, Node.js, Next.js, React, PostgreSQL, Stripe, Docker, RabbitMQ, Tailwind CSS

Full-Stack Engineer (Contract) — Dancedeal

2025 – Present

- Reviewed and refactored an existing full-stack codebase, identifying and fixing critical bugs across backend APIs and frontend flows to improve stability, correctness, and maintainability.
- Took ownership of production deployment: provisioned AWS infrastructure, configured environments, deployed backend and frontend services, and set up DNS and domain configuration for live usage.
- Improved authentication and authorization logic by strengthening token handling, fixing edge-case auth bugs, and adding email validation to the signup and login flows.
- Enhanced backend reliability by improving error handling, input validation, and API contracts across core domains including users, courses, enrollments, and transactions.
- Reviewed and optimized integrations with payment providers (Flutterwave/Stripe), including webhook handling and transaction verification logic.
- Improved frontend logic and UX in the Next.js application by fixing auth flow issues (including a multi-step signup wizard), refining form validation, and stabilizing API consumption via fetch wrappers.
- Collaborated on end-to-end feature stabilization—from database logic and backend services to frontend behavior—prioritizing production readiness, security, and long-term maintainability.

Tech: TypeScript, Node.js, Next.js, React, PostgreSQL, Docker, AWS, Tailwind CSS, React Hook Form, Zod, Flutterwave

Full-Stack Engineer (Contract) — StalwartBlue

2023 – 2025

- Joined the team on existing codebase and refactored core backend and frontend logic to improve performance, stability, and maintainability.
- Rewrote the full loan lifecycle (application, approval, repayment) to reduce bugs and improve efficiency across business and admin workflows.
- Added real-time chat functionality and built a proper notification system (email and in-app) for users and administrators.
- Improved dashboard UX, table search, and overall frontend performance in the Next.js application.
- Strengthened backend APIs, auth, cron jobs, and notification services; shipped production fixes and performance optimizations.

Tech: TypeScript, Node.js, Next.js, React, Express, MongoDB, Docker, Cron Jobs, Tailwind CSS

Backend Engineer — BrainzCode

June 2025 — July 2025

- Built Python-based backend services for AI-powered applications.
- Worked on voice cloning and voice synchronization systems.
- Implemented secure authentication mechanisms.
- Deployed and managed services on AWS and Google Cloud.
- Handled DevOps tasks including server provisioning and production deployments.

Tech: Python, AWS, Linux, AI models

Lead Frontend / Full-Stack Engineer (Contract) — Solid Fiction (Growthclub)

2023 – 2025

- Led frontend development for Growthclub from project setup (Next.js) through launch, translating Figma designs into a responsive, high-performance production UI.

- Worked closely with the backend engineer and UI/UX designer to define API contracts, auth flows, and end-to-end product behavior.
- Built core frontend features including authentication, dashboards, subscription and payment interfaces, and reusable component systems.
- Returned to the project post-launch to maintain and extend the product as a full-stack engineer, fixing bugs and improving reliability.
- Implemented and maintained backend features for payments, transactions, cron jobs, and webhooks to support ongoing operations.

Tech: JavaScript, TypeScript, Next.js, React, Node.js/Express, MongoDB, Redis, Stripe, Docker, Tailwind CSS

Education

University of Lagos, Nigeria

- **LLB Law**

2016 - 2023

PROJECTS [Chibuike \(Chibuike E.\)](#)

- [Lexanalytics](#) — AI-powered legal research, analytics & contract automation.
- [DanceDeal Training Foundation](#) — Online training & registration platform.
- [Dancerapy](#) — Dance fitness video streaming platform.
- [Nuvoro](#) — Appointment booking & payment system for service businesses.
- [Stalwartblue](#) — Enterprise capital & funding management portal to loans.
- [GrowthClub](#) — Enterprise capital, Life Style & funding management portal.
